

Denton ATD and First Technology Safety Systems (FTSS) are now subsidiaries of **Humanetics Innovative Solutions**

In April 2010, Denton ATD (dentonatd.com) and First Technology Safety Systems (ftss.com) became subsidiaries of Humanetics Innovative Solutions. This combines the expertise, experience and knowledge from both companies to provide a strong platform for the next generation of innovative dummy and software products.

Benefits to the industry will include the continuation of future dummy development and an increased technical service and support. Mr. Christopher O'Connor, CEO of Humanetics Innovative Solutions explained that, "having access to resources from each company will create valuable synergies for all our customers."

Based on initial customer feedback, Humanetics is committed to provide increased technical support and continuation of both the FTSS and Denton brands to insure full backward compatibility. With this restructuring, the company has decided to not continue to sell two different products in the field of virtual testing but to harness the joint efforts and accelerate further improvements in one Humanetics virtual product line. Going forward, new crash dummy hardware development will result in one harmonized product consequently reducing inherent variability.

To simplify the experience of the European customer base, FTSS Europe and Denton COE GmbH will harness their joint efforts under Humanetics Europe allowing customers to have one single entry to all products, services and knowledge. The individual relationships will remain in place with combined products and services giving Humanetics Europe a stronger position to provide improved levels of support to its customers in the field of crash safety testing.

Humanetics Innovative Solutions (www.humaneticsatd.com) is a global company whose strategy is to harness the best technologies in the creation of high quality products which play a significant role in improving safety, comfort and protection of people. Humanetics is the world's leading supplier of sophisticated, physical and virtual crash test dummies, load cells, associated services and specialties in static and dynamic strain measurements.
