First Technology Safety & Analysis Holdings Ltd. (FTSA) Announces iCrash Contracts in Sweden

Plymouth, Michigan, April 30, 2007 – FTSA has been awarded a contract by Volvo Car Corporation (VCC) in Gothenburg, Sweden to provide six Hybrid III 50th Crash Dummies with integrated sensors and TDAS G5 Data Acquisition Systems from DTS.

FTSA has delivered two of the six Hybrid III 50th dummies upgraded to the iDummy technology to VCC. The use of these iDummies will save them time in setup and dummy positioning. Furthermore they will have the flexibility to use the modular TDAS G5 units in other applications like the iWall.

After accepting the contract for iDummy, VCC also recently agreed to a contract to acquire a Load Cell Barrier Wall (iWall) with integrated DAS from FTSA. This makes Volvo the world's leader in using iCrash Technology, with just under 900 Channels of integrated TDAS G5.

Mats Garsten, Project Manager (VCC) stated, "Volvo recognizes that integrating the DAS into the crash dummies is the future of the crash testing industry."

iCrash Technology™ is a partnership of two industry leaders in the world of occupant safety. First Technology Safety & Analysis (FTSA) and Diversified Technical Systems (DTS) have partnered to create the iCrash Technology line of integrated crash testing solutions.

ABOUT - FTSA is the world's largest creator of sophisticated crash test dummies and load cells. DTS is the world's leading manufacturer of data acquisition systems for dynamic testing.
